NO MORE FLATS!

Are you tired of losing sales because your route delivery driver is trying to fix a flat tire. Does your driver complain that those hard tires you got him just won't roll over rocks and thresholds like pneumatics do. Well, now you can have it just the way you want it! A tire that works just like a pneumatic, but doesn't need air. As a matter of fact, you can drive a nail into this tire and keep rolling all day long.

By-the-way, if you've been using a flat free tire already and don't like the way they absorb water, this is your solution. This microcellular tire is made of closed cells so they can't absorb anything. Some of our best customers have fallen in love with this wheel. Won't you try it today?
